# Netmask Calculator

---

|                     |                                     |
|---------------------|-------------------------------------|
| Network Number:     | <input type="text" value="\$netn"/> |
| Existing Netmask:   | <input type="text" value="\$netm"/> |
| OR                  |                                     |
| Requested Networks: | <input type="text" value="\$nets"/> |

---

```
EOH if((" $netn" ne "" )&& (" $nets" ne "" || " $netm" ne "" )) { &mainsub; } else { print  
<<"USAGE";
```

Use the above form to verify an existing network and netmask or to calculate the appropriate network and netmask values for any network.

- Enter a network number (such as 205.185.225).
- Enter one of either:
  - The existing netmask.
  - The number of subnets needed.
- Then click on *GO*.

The program will round the number of subnets up to the next logical number of bits to be used. The bits used from the host address and added to the network address are displayed in **bold**.

```
USAGE } print <<"EOE";
```
